Agcom is a tech company established in 2022 and fully registered with Uganda Registration Services Bureau on 23rd July 2022. Our goal is to enable all stakeholders, especially within the agricultural sector, to have access to finance, and pre and post-harvest handling services to establish a strong agricultural background within our communities. With our data-driven analytics solution, we want to empower farmers, investors, the private sector, and various government entities to attain sustainability within the agricultural sector and food security systems.

We encourage farmers to build a sustainable and bankable value chain entities that should be able to generate more revenue within the competitive market. Our solution is to enable efficiency in farming, and production processes and enable farmers to have the capacity to monitor the whole process of their entity development. These will benefit even the consumers in the long run and house hold farmers to attain middle-income status and should be able to compete favorably in the global market within the next few years.

### **OUR VISION**

To build a system where, financial services will seamlessly be managed, embedded, and easily accessed not only in the agriculture sector but across all industries within the East African region and beyond.

THE FUTURE OF FARMING

As a leading Agritech company within the region, we have braced ourself with vast knowledge to fill the missing gaps in some of these various sectors like finance, agriculture, energy & infrastructure development by integrating our banking as a service and e-market services with our enterprise resource planning service. Our international partners and government entities are already making steps towards building sustainable food security systems through the introduction **of indoor vertical farming, regenerative farming, aerial imagery, agricultural robotics and digital information sharing** to make most of the value chain products much more bankable for sustainable economic development in Africa.

In Uganda, models like the parish development model and operation wealth creation have been enrolled into the government systems to bolster household income and economic development. At the same time in Kenya, more than 14 mobile applications have been developed through private-public partnerships to bridge some of these gaps in the technological sector. NGOs, banks, and other financial institutions or corporations are also trying to build sustainable food security systems within the region by empowering various stakeholders in the agricultural sector. Agcom had to come in-play to help fill in some of these gaps left by other institutions and entities through its technological innovations and services.

## **ERP** (Enterprise Resource Planning)

As a leading tech company, we want to bridge the gaps within the food security system using our 360 all-in-one farm management solution, which can swiftly be integrated into the agricultural sector for investors, farmers, procurement, processing, supply chain and financial data management, and analysis. Our ERP platform has also been synched with our BAAS(banking as a service) solution for any entity in regards to building a bankable agricultural value chain process and an e-market service solution to help bridge some of the gaps for house hold farmers and agribusinesses.

Agcom is helping all **corporate and individual farm operators, agribusiness and contract farming companies, exporters, R&D institutions, and government agencies, co-operatives** to exploit the power of smart agriculture to achieve higher efficiency, higher yields, higher profitability, and complete traceability for their products to maximize on profits generated across the agricultural sector.

### **BAAS** (Banking As a Service)

Agcom is setting the pace with its BAAS (Banking as a service) platform embedded in our customized API system to enhance the provision of financial services in the current regional market as we empower various entities including agribusinesses and startups. Our mission is to enable most of our partners plus other private sector players to be able to offer better and seamless financial services to various consumers in the market to build wealth in our various communities.

With our enterprise resource planning software (ERP) solution already in play for **agribusinesses**, **we seamlessly integrate most of our dynamic services to favor most of the consumers**, **especially farmers in terms of credit facilitation**, **swiftness in terms of access to finance**, **and security**. On the other hand, most of these already established financial companies and other entities can also benefit through using our API services to provide a fully licensed state-of-the-art financial services and better banking products to bridge the gaps in the agricultural sector.
